- **Plug & Play** The Shield laminators are equipped with an internal compressor. It's enough to plug it, let the machine reach its temperature and start working.
- **Eco-friendly** The air pressure system implies lower power consumption than the electric motors.
- **Self-adaptive** the air pressure system with independent pistons adapts automatically to different thicknesses and to different materials often not completely flat. The rollers simply adapt to the media surface in real time.
- **Flexible it** is possible to pre-define the pressure to be applied to each media. Once you have placed the material it is always possible to adjust the pressure.
